

## **Statement G**

### **Indented Markings**

Originally Adopted October 1974

Revised September 1986

March 1992

May 2000

When pipe or tubing is marked by indentation, care should be taken to ensure that the markings do:

1. not reduce the wall thickness to less than the minimum value for the pipe.
2. not have any effect on the long-term strength of the pipe.
3. not provide leakage channels when elastomeric gasket compression fittings are used to make the joints.

Either the indented print line shall be in a color that contrasts with that of the pipe, or a separate print line shall be in a color that contrasts with the pipe.
